Phase 2 Reopening Considerations

Phase 2 of reopening in most regions allows professional services to resume. Employees are heading back to offices after roughly three months of remote work. With this, access control measures should be reactivated and updated to address temperature screening requirements.

- ✓ Conduct TSCM sweeps of office areas for listening devices
- ✓ Plan a gradual restart to avoid overwhelming operations
- ✓ Share your reopening plans widely to all employees returning
- ✓ Implement temperature / health screening for all entrants
- ✓ Conduct refresher training for frontline security
- ✓ Prepare for new threats in the post COVID environment, such as civil unrest
- ✓ Assess location specific crime trends and determine new security implications
